Health care is about curing and healing; art and science, mind and heart, skills and knowledge, technology and compassion, living and dying, life and death.

Health care is based on a business model of efficiency, the work we do is about relationship—relationship with self, other and Other

Relationship is sacrificed to action and efficiency

Centre for Practitioner Renewal

- ❑ How do we sustain health care providers in the work place?
- ❑ What is the effect of being in the presence of suffering?
- ❑ What would be reparative, healing or restore resilience for health care providers?

Efficiency through relationship

Objectives

- To understand the personal impact of the work we do.
- To learn about empathy and identification, moral distress, burnout, vicarious trauma, and psychological repair.
- To explore features that we bring to the workplace, those that sustain us and those that hinder our growth and well being.

Palliative Care

Active, total care of patients whose disease is not responsive to curative treatment.

Control of pain, of other symptoms and of psychological, social and spiritual problems is paramount.

World Health Organization

Palliative: to cover, to shroud, to veil

With regard to the psychological and spiritual issues, people want to uncover, to unshroud, to unveil!!

Communication

Speech is a mirror of the soul: as a man speaks so is he.

Publilius Syrus, 1 BC

There are tones of voice that mean more than words.

Robert Frost

First, do no harm.

Hippocrates

Touch

For me, touch is almost a necessity of life, yes it is a necessity of life. We need to be touched...touching, I think it's magical, I really do feel that if it isn't physically healing, it is certainly emotionally and psychologically a way of healing.

Touch

Touch is healing

- ◆ emotionally and psychologically
- ◆ essential to one's sense of well-being

We are all so much together and yet we are dying of loneliness.

Albert Schweitzer

Touch

All I cared about was that someone was touching me and I knew that I wasn't alone, it's so important, it's so important

Touch counteracts the sense of aloneness, the sense of being out of touch, of being untouchable.

Touch

Whatever else we are, we are bodies and that as bodies we need to touch and be touched by each other as much as we need to laugh and cry and play and talk and work with each other.

Frederick Buechner

Touch

The dismay of being sick comes in part from the loss of close human contact; touch is medicine's real professional secret.

Lewis Thomas

Communication (Cont'd)

...then all things are starting to flow by me. Having the CT scan done and turning over and seeing six or seven physicians there pointing and looking at the computer screens, trying to read their faces. Not one of them showing any bit of emotion or coming in to calm me down.

Communication (Cont'd)

Communication

Iatrogenic Suffering

Iatrogenic: originating from the treatment

Dorland's Medical Dictionary

*Suffering: a perceived or real threat to the sense
of the intact self*

Eric Cassel, MD

The Nature of Suffering

Iatrogenic Suffering

Oh by the way, we were wrong. It is cancer. I have made an appointment for you to see the oncologist in a few days.

The way in which the doctor talked with me caused me more pain than the pain from the disease itself.

Do Good; Do No Harm!

The Patient

The Family

The Friend

The Health Care Provider

The Hospital

The Health Care System

Iatrogenic Suffering

Who Suffers?

Who am I?

Who Suffers?

(Toxic*) Shame/Failure

*Toxic shame: a rupture of the self with the self
(Bradshaw)

I/Thou (Martin Buber)

An emotional need is met with a cognitive response.

Death Anxiety

- Grief to relatives and friends
- All plans and projects come to an end
- Process might be painful
- No longer able to care for dependents
- What happens if there is life after death?
- Fear of what might happen to my body after death.

Diggory and D. Rothman, "Values Destroyed by Death," *Journal of Abnormal and Social Psychology* 63 (1961):205-10

Estrangement

(Absence of sense of connection)

■ Self

- ◆ The greatest burden a child must bear is the unlived life of the parent. Carl Jung
- ◆ The greatest burden the patient must bear is the unrecognized/unresolved psychological and/or spiritual issues of the health care provider.

■ Other

- ◆ Patients
- ◆ Colleagues (Same discipline, other disciplines)
- ◆ Administration (Decision making, Systemic issues)

■ OTHER

Grief

- Grief is wanting more of what one will never get again.
- Grief begets grief (Grief of the past creeps into the present)
- Variable in duration

Grief

Change

Loss

Grief

Anger/Rage

Sadness

Fatigue/Lethargy

Isolation

Unfixable Suffering

Trauma: sense of helplessness in the face of
unfixable suffering

Judith Hermann

Vicarious Traumatization

- A stress reaction experienced by therapists and researchers who are exposed to disclosures of traumatic images and materials by clients and research participants, in which therapists or researchers experience enduring changes in the manner in which they view self, others and the world. (McCann & Pearlman, 1990)
- Occurs over time
- Process of accumulation (sedimentary layers of horrible stories building until one cannot distinguish one from another)

Vicarious Traumatization

Long-term, inevitable, expectable consequence of working with suffering people.

Causes:

- ◆ A transformation of the system of meaning in the sufferer
- ◆ A darkening of one's worldview, spirituality and relationships (Pearlman and Saakvitne, 1995)

Vicarious Traumatization

- Vicarious Traumatization (McCann & Pearlman, 1990)
- Secondary Traumatic Stress (Stamm, 1995)
- Compassion Fatigue (Figley, 1995)

Secondary Traumatic Stress Disorder (STSD)

A syndrome of symptoms nearly identical to PTSD, except that exposure to knowledge about a traumatizing event experienced by a significant other is associated with the set of STSD symptoms, and PTSD symptoms directly connected to the sufferer, the person experiencing primary traumatic stress.

Figley, 1995

Metaphors of Secondary Traumatic Stress

- *There were days when I just didn't have my being with me when I went to work.*
- *Coming home from work I would feel that dark, heavy cloak come over me and I would just be draped in despair.*

Metaphors of Secondary Traumatic Stress (Continued)

- *I would stay at work as long as I possibly could to keep the dogs at bay—my workaholism was my coping mechanism and it was killing me.*
- *I isolated myself socially. No one, not my family or friends could understand what I had witnessed, nor could I tell them. I didn't want to make my home toxic.*

STSD Defined Within PTSD Description

The person has experienced an event outside the range of usual human experience that would be markedly distressing to almost anyone: a serious threat to his/her life or physical integrity; serious threat or harm to his/her children, spouse, or other close relatives or friends; sudden destruction of his/her home or community; or seeing another person seriously injured or killed in an accident or by physical violence.

Figley, 1995

Post Traumatic Stress Disorder

- Manifests after an exposure to inescapable horror, where fear and helplessness overwhelm one's defenses.
- Impairs the senses of safety, trust, esteem, intimacy, control, and sensory intrusion.

Post Traumatic Stress Disorder

- Three symptoms
 - ◆ Hyperarousal
 - ◆ Avoidance and/or numbing
 - ◆ Reexperiencing
- Causing
 - ◆ Distress
 - ◆ Disengagement from the world
 - ◆ Marked decrease in functioning

Hyperarousal

- Insomnia
- Decreased concentration
- Increased startle response
- Irritability
- Anger
- Hypervigilance (always scanning the environment for danger)

Avoidance

- Withdrawal from life or things one previously enjoyed
- Depression
- Shunning anyone, anything, or anywhere that reminds you of the traumatic event

Reexperiencing

- Intrusive recollections of the event
- Nightmares
- Dreams of the event
- Reactivity to triggers
- Flashbacks
- Traumatic memory replaying itself in your mind as if it were happening in the present

Impaired Domains (VT & PTSD)

- Safety
- Trust
- Esteem
- Intimacy
- Control
- Sensory intrusion

Most common signs

- Increased rates of illness
- Cynicism
- Sadness
- Intolerance of emotion
- Addictive responses
- Exhaustion
- Depression
- Loss of efficiency
- Judgment errors

Personal Assessment

At the end of each day and that the end of your work week, how would you rate your emotional stress level? What do you notice in your body, your mind and your feelings as you leave your work?

How do you feel as you commute to work? As you commute home? When you arrive home? After an hour at home? As you fall asleep? Do you dream about your work? If so, what are the themes and imagery in these dreams?

Impact of VT on Patient Care

- Iatrogenic Suffering
- Team dynamics
- Boundary Issues

Burnout

- Emotional exhaustion
- Depersonalization
 - ◆ A negative attitude towards clients
 - ◆ Personal detachment
 - ◆ Loss of ideals
- Reduced personal accomplishment and commitment to the profession.

Maslach, 1993

Moral Distress

- The negative feelings resulting from a situation in which moral choices cannot be translated into moral action
- Associated with experiences of anger, frustration, guilt, and powerlessness

Jameton, 1984; Rodney and Starzomski, 1993

Who am I?

Many people miss out on themselves as they journey through life. They know others, they know places, they know skills, they know their work, but tragically, they do not know themselves at all.

John O'Donohue: Anam Cara

Who am I?

- Who would I be if I was not living up to the expectations of others?
- What would others need to know about my family of origin to understand me or to know who I am?
- What is my repetition compulsion?
- Which emotions am I most afraid of expressing?
- Was I traumatized or neglected in my childhood?

Who am I?

- Whose life am I living?
- What do I want?
- Who do I admire?
- Who do I despise?
- What does spirituality mean to me?
- Do I feel seen, heard, and understood?

Who am I?

- What brought me to health care?
- What keeps me in health care?
- Who do I expect from patients?
- What do I expect from colleagues?
- What do I expect of myself?
- If I had \$2, 000,000 what would I do?
- What makes my heart sing?

The practice of medicine is:

an art, not a trade;

a calling not a business;

*a calling in which your heart will be
exercised equally with your head.*

Sir William Osler

*The secret of the care of the patient is in caring for
the patient.*

Dr Francis W. Peabody

Another secret of the care of the patient is in caring for the health care provider.

*When our psyche (soul) cannot get our attention,
our bodies will.*

Only what is really oneself has the power to heal.

The psyche moves naturally toward wholeness.

Carl Jung

If you bring forth what is within you, what you bring forth will save you. If you do not bring forth what is within you, what you do not bring forth will destroy you.

The Gospel According to Thomas

Ultimately, the richest source for meaning and healing is one we already possess. It rests (mostly untapped) in the material of our own lifestory, in the sprawling, many-layered 'text' in the depths of, and as, our life.

Kenyon and Randall

A story is not just a story. In its most innate and proper sense, it is someone's life. It is the numen of their life and their first hand familiarity with the stories they carry that makes the story 'medicine' ...a medicine which strengthens and rights the individual and the community

Clarissa Pinkola Estés

Addressing STS/VTS

Coping

- Self care
- Self nurturance (rest/play)
- Escape

Addressing STS/VTS

Transforming

- Self-awareness: strengths, vulnerabilities, needs
- Continuing growth – personal & professional
- Connection
 - ◆ To self (time for self-reflection)
 - ◆ Work related support
 - Effective debriefing procedures
 - Supervision/Mentorship
 - Collegiality
 - ◆ Social support
 - ◆ Spiritual connection

Self Knowledge and Connection

The unexamined life is not worth living. Socrates

We live forward, we understand backward. Kierkegard

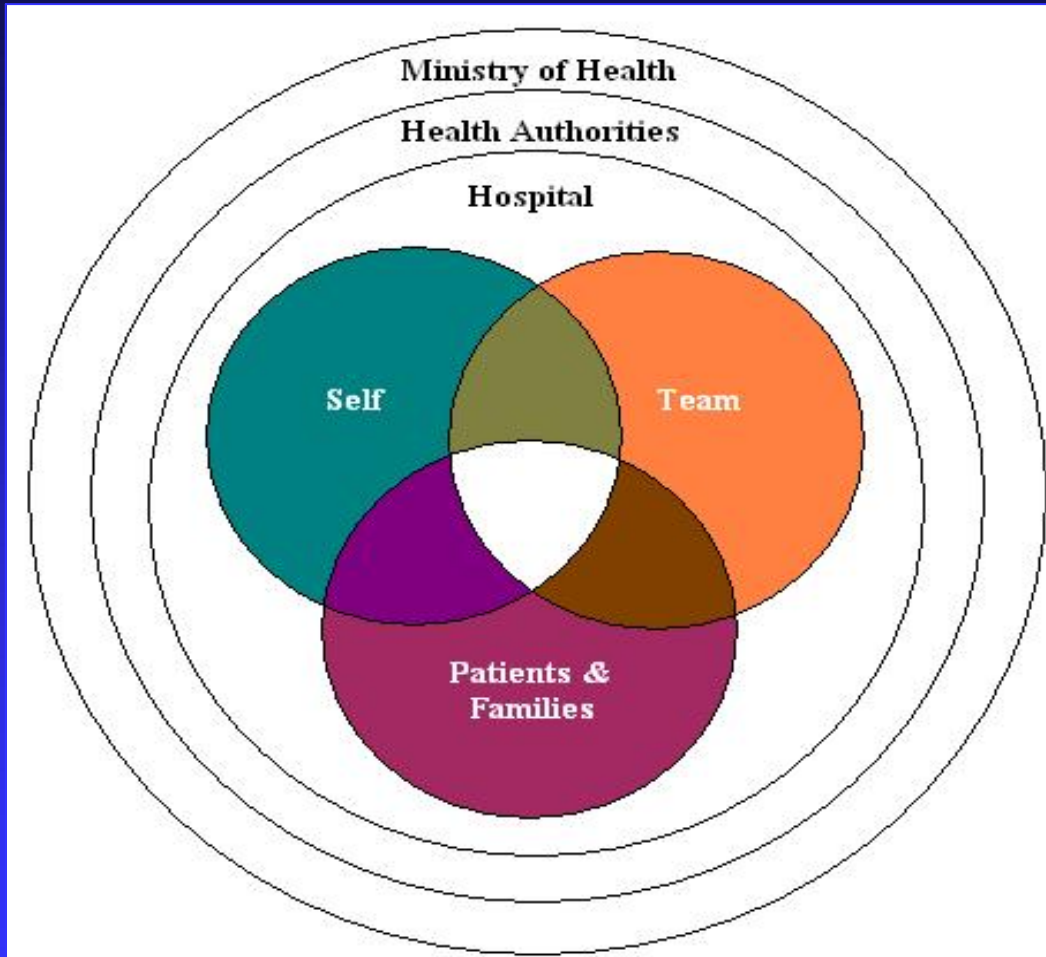

To understand ourselves we have to be understood by another. To understand another we have to understand ourselves. Watzlawick, Bevan & Jackson

Effective Coping Strategies

- Cumulative Critical Incident Stress Management
- Individual Counselling
- Team Agreements
- Communication Skills (Difficult Conversations)
- Addressing the Conspiracy of Silence
- Forgiveness and Reconciliation
- Laughter, fun

Spiritual Connection

- Values
- Purpose
- Meaning
- Connection

Mental Health & Psychological Well Being in Health Care (Nurses)

- Reported in 2002 that the rate of absenteeism and work loss (due to illness, injury, burnout & disability) among Canadian nurses was almost double that of the general labour force.
- It is estimated that over the course of a year 16 million nursing hours are lost to injury & illness (= 9,000 FTE positions).

Mental Health & Psychological Well Being in Health Care (Physicians)

Significantly higher levels of burnout than the general population - 46% of respondents to the CMA 2003 Physician Resource Questionnaire reported experiencing an advanced stage of burnout.

- ◆ Lost productivity, depression, addictions
- ◆ Higher rates of suicide than the general population
- ◆ Distress in physicians' family lives
- ◆ Sub-optimal medical care & increased patient suffering

Challenges to Well Being in Health Care

- Economic restraint & restructuring
- Rapidly developing technologies
- Increased access to information (and misinformation!)
- Increased patient complexity & an aging population
- Shortage of practitioners & multigenerational issues
- Decreased numbers of beds
- A more critical & litigious social climate

Challenges to Well Being in Health Care

- Demands to work faster & harder
- Adjust to changes that are out of their control
- Experience reduced social support

**THE IDEAL RECIPE FOR
BURNOUT**

Challenges to Well Being in Health Care

“High demand/low control is bad enough; high demand/low control/low support can be deadly.”

Sotile W.M. and Sotile, M.O. (2002) The Resilient Physician.

Systemic barriers to well being

- Heavy physical & emotional demands coupled with consistent exposure to suffering
- A culture of stoicism, self sufficiency and silence
- Stigma persists around mental health issues and help seeking

Systemic barriers to well being (Cont'd)

- Perfectionism & compulsiveness are sanctioned and reinforced by work pressures & societal expectations
- Reluctance to disclose personal or a peer's distress
- Lack of sufficient & easily accessible resources

Personal barriers to self care

- Internalized stigma
- Too busy – overburdened and lacking peer support
- Denial or minimization
- Prior experience of being “shamed & blamed”

Personal barriers to self care

(Cont'd)

- Unwillingness to become a patient and/or challenges in being treated as a patient
- Fear of loss of license and livelihood
- Fear of possible diagnosis
- Concerns about family/friends/colleagues not accepting or negatively judging them

Contributing Factors

Person:

- ◆ Personal history
- ◆ Personality/coping style
- ◆ Current life context
- ◆ Training and professional history

Contributing Factors

Situation:

- ◆ Clientele/patients
- ◆ Specifics of traumatic events and experiences
- ◆ Cumulative exposure
- ◆ Organizational context
- ◆ Social and cultural context

Hurt people hurt people.

Rick Singleton

Director

Pastoral Care and Ethics

Eastern Health, St. John's, Nfld

Team Charter

1. Job Descriptions
2. Role Definitions
3. Team Agreements
4. Annual Reviews
5. Relationships

Effective Group/Team

Safety

Inclusion

Trust

Relationships

- Self
- Other
- OTHER

Team Charter

Team Agreements

- ◆ What brings us together in the workplace?
- ◆ How are we going to be together in the workplace?`
- ◆ What are our values?
- ◆ How are decisions made?
- ◆ Accountability?

Team Charter

Relationships

- ◆ Expressed Empathy
- ◆ Difficult Conversations
- ◆ Conflict Resolution
- ◆ Dual Relationships
- ◆ Promotion

Expressed Empathy

Your expression of your understanding of the other person's

- Experiences
- Behaviours
- Feelings

“You feel _____ because _____.”

Empathy vs. Identification

Effective Coping Strategies

Empathy vs. Identification

Team Charter

Difficult Conversations

- ◆ Awareness
- ◆ Bridge
- ◆ Communication/Connection
- ◆ Interpersonal Gap (**Intent does not determine effect**)
- ◆ Developing a Contract

Team Charter

Difficult Conversations—Words not to use.

- ◆ Why
- ◆ Never
- ◆ Always
- ◆ Suck it up
- ◆ Forget the past; just move forward

Self Knowledge and Connection

To understand ourselves we have to be understood by another. To understand another we have to understand ourselves.

Watzlawick, Bevan & Jackson

THE PERSONAL ICEBERG METAPHOR OF THE SATIR MODEL

BEHAVIOUR (action, storyline)

COPING (stances)

FEELINGS (joy, excitement, anger hurt, fear, sadness)

FEELINGS ABOUT FEELINGS
(decisions about feelings)

PERCEPTIONS (beliefs, assumptions, mind-set,
subjective reality)

EXPECTATIONS (of self, of others, from others)

YEARNINGS (loved, lovable, accepted, validated,
purposeful, meaning, freedom)

SELF: I AM (life force, spirit, soul, essence)

First Experience of Team

(Your family of origin)

- Who was in your family?
- What was your birth order?
- Who was in your extended family?
- What were 2 of your family values?
 - ◆ Do you hold them today?
- Who were/are you close to?

First Experience of Team

(Your family of origin)

- How were decisions made?
- Who was present?
- How were differences of opinion expressed?
- Who held the power? Who had control?
- How was anger expressed?
- What affect did it have on you at the time?
- How might that first team affect your work today?

Today's Team

What do I want?

What do I need?

What are my expectations?

What can others expect from you?

One Stick, Two Stick
The Way of the Old African Kings

Clarissa Pinkola Estés

Women Who Run With the Wolves

*We are strong when we stand with another soul.
When we are with others, we cannot be broken.*

Clarissa Pinkola Estés

Women Who Run With the Wolves
